

HOW TO STORE AND USE DATA CAPTURED IN A LOOP

In order to refer back to the data collected in a loop, the data needs to be stored in a separate dummy question.

- 1) Set up the loop questions to study specifications. Add a dummy after the question in the loop that you want to capture the data from. The dummy question will have the same answer list as the driver and needs to be a multi-punch question.
- 2) Branch the answer(s) that you are going to capture to the dummy. Branch all other answers around the dummy. This branching may need to be to the next question in the loop or the next question after the loop.
- 3) The dummy question requires the following conditionals. The first conditional is used to hide all of the answer choices. Next, add a conditional for each driving answer of the loop in the following format :

```
IF DRIVING ANSWER # EQ 1  
THEN SHOW ANSWER CODES 1  
AND HIDE ANSWER CODES 0
```

- 4) Add the specific loop that is required for your question format, and be sure to include the dummy question in the loop.
- 5) After the loop, create a 2nd dummy question with the same answer choices and add a grid to display all mentions from the first dummy. You may now refer to this dummy for displaying the punches as answer text and in conditionals.

*** QUESTION #1 ***

DRIVER

Q1. HAVE YOU EVER BEEN... (READ LIST - SELECT ALL THAT APPLY)?

GO TO Q. #2 =====> <1> BUNGEE JUMPING
GO TO Q. #2 =====> <2> HANG GLIDING
GO TO Q. #2 =====> <3> ROCK CLIMBING
GO TO Q. #2 =====> <4> SCUBA DIVING
GO TO Q. #2 =====> <5> SKY DIVING
GO TO Q. #2 =====> <6> %(DO NOT READ) NONE OF THE ABOVE

- MULTI-PUNCH -
