

HOW TO CREATE A VOLUMETRIC SERIES

A volumetric is used to compare a constant value to a numeric question. A volumetric can also be used to compare two numeric questions.

- 1) Set up numeric question(s) to studies specifications.
- 2) Create a volumetric series at the first question after the numeric question(s).
 - A. Select the question for the volumetric to occur at.
 - B. Choose the question (or constant) to base the series to.
 - C. Type in the question(s) and answer(s) for the volumetric to accumulate.
 - D. Choose where to branch if the volumetric is not equal.
- 3) If a text screen needs to appear which states that the answers do not add up to the desired sum; add a text screen after the last numeric question in the series. Be sure to branch around this question. The text screen must branch back to the first numeric in the series.
- 4) If 'Don't Know' is allowed in the numeric question series, branching using conditionals must be added.
